- 2 years manufacturers warranty

### Mobile DVD RW Recorder LS PRO

More and more notebook vendors chose to leave the optical drive out of their notebooks. But CD's and DVD's are still one of the most commonly used media types. Freecom has the solution. The new Mobile DVD RW recorder is a super small external CD/DVD drive, barely larger than a CD and fits easily in your pocket. Work on any notebook or PC while on the move, burn CDs or DVDs and store up to 8.5 GB of important data. Thanks to the LightScribe laser labeling technology, you can now create professional looking labels for your CDs and DVDs without the use of ink, pens or stickers. After burning the data, simply place the Lightscribe CD or DVD media upside-down in the drive, and your label is written to the surface with the same laser that burns the data.

#### LightScribe - A whole new way to label your discs

LightScribe is an innovative technology that uses a special disc drive, special media, and label-making software to burn labels directly onto CDs and DVDs. Because the labels are laser-etched -not printed- there's no ink, no smudging, and no peeling. Your labels can be whatever you want them to be. Create one-of-a-kind designs with your own photos, text, and artwork using your label-making software.

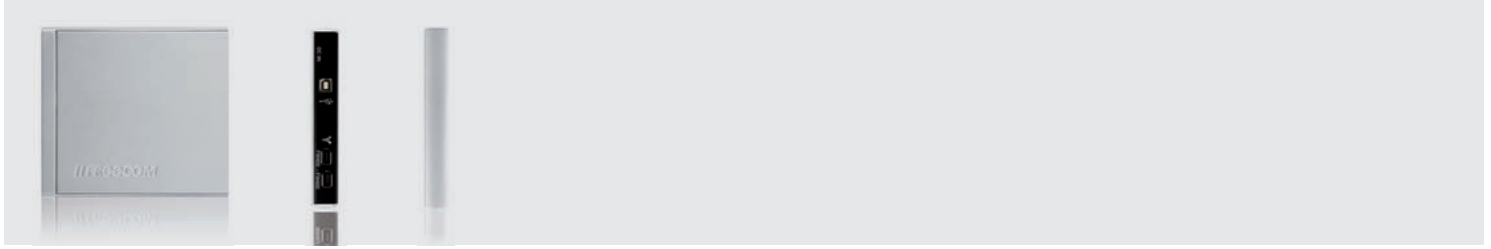

Once you create your design, be sure to follow these three steps:

- Burn your data (music, photos, video, etc.) in the LightScribe drive.
- When your data burning is complete, open the drive and flip the disc over.
- Burn your LightScribe label. Remember, the same drive that burns your data burns your label, too.
